# 编译jar包-并引用

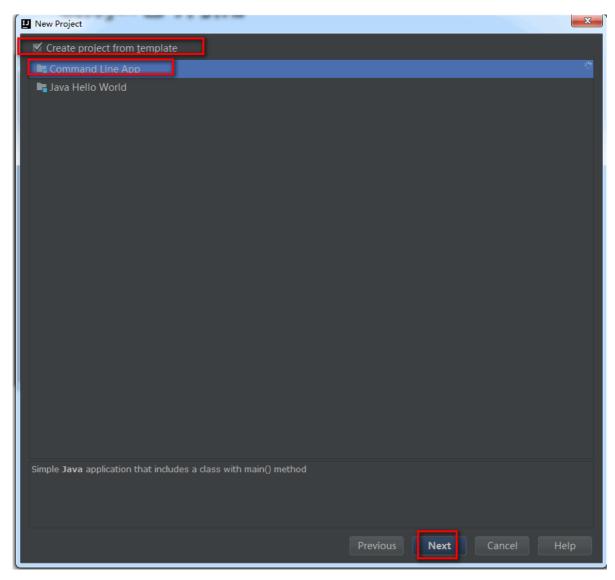

# 编译JAR包

#### 创建工程

01- 创建工程01

02- 创建工程02

03- 创建工程03

```
■ New Project
                                                                                                                  ×
  Project name: TestCreateJar
 Project <u>l</u>ocatio 1: F:\javaWorkplace\TestCreateJar
 Base package: com.fiberhome
                                                                                   Finish
```

#### 04- 生成的工程

05- 修改类名

#### 06-编写新增接口代码

```
| FestCreateJar | FlyanWorkplace | SetScreateJar | SetScreate
```

### 设置模块编译JAR包

file->

ProjectStructure->

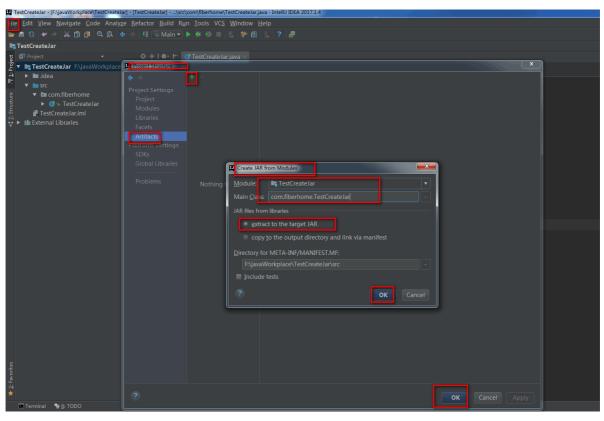

ProjectSetting->

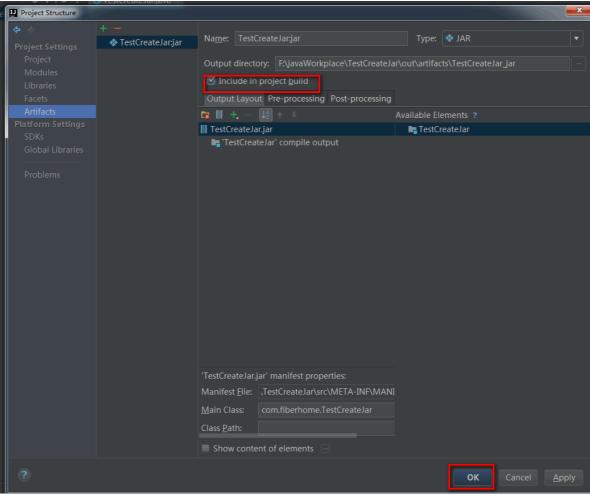

Artifacts->

"+"->

JAR->

from moudles with dependencxxx ->

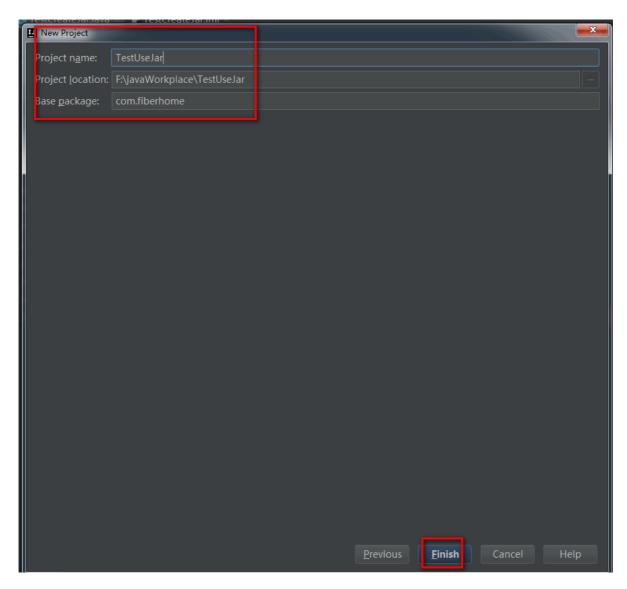

#### 编译

Build-> Build Artifacts...-> Build

### 生成的jar包

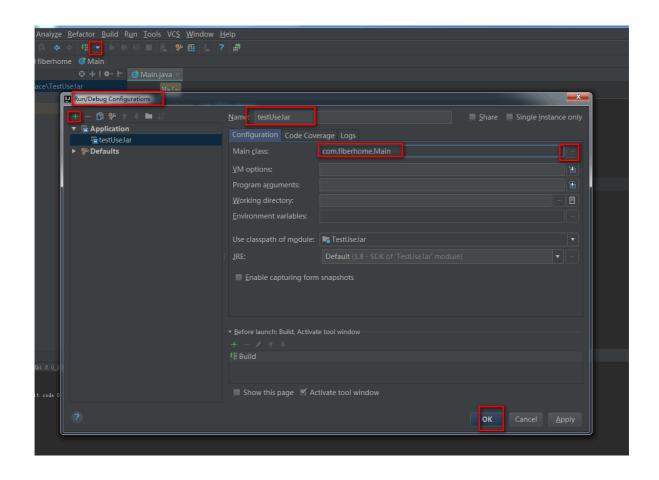

## 使用jar包

创建使用jar包工程

### 配置工程保证可正常运行

Edit Configuratios->"+"->Application

### 添加jar包

file->

ProjectStructure->

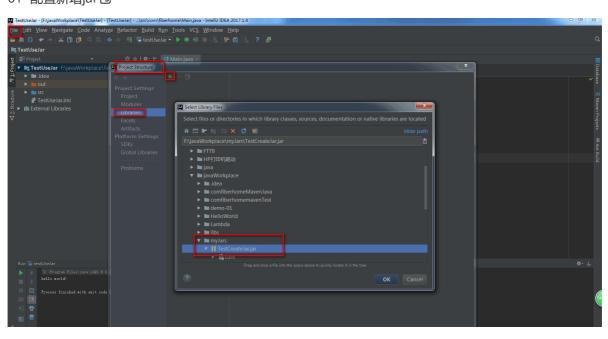

ProjectSetting->

Libraries->

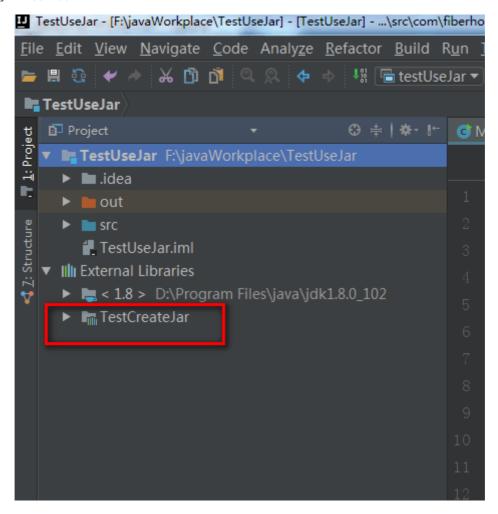

"+" ->

java ->

01-配置新增jar包

#### 02-新增jar包后查看

#### 03-使用jar包中的接口方法

```
